Project Name: Online Job Portal System with Role-Based Access

Introduction:

In today's digital era, job searching and recruitment have shifted to online platforms. Traditional methods are slow and inefficient. This project develops a web-based Job Portal System where job seekers can find and apply for jobs easily, and employers can post and manage vacancies efficiently. An admin panel ensures proper management and monitoring of the platform.

Objective:

- Develop a multi-user job portal system
- Simplify the recruitment process
- Enable job seekers to apply for jobs online
- Allow employers to manage job postings and applicants
- Implement secure authentication and role-based access control

Required Tools and Materials:

- **Frontend:** HTML, CSS, JavaScript (or React.js)
- **Backend:** Java Spring Boot (REST API)
- **Database:** MySQL
- **Tools:** IntelliJ IDEA / VS Code, Postman, Git & GitHub

Project Details

- **Users:** Job Seekers, Employers, Admin
- **Job Seeker Features:**
    - Register and login
    - Search and filter jobs
    - Apply for jobs
    - Upload resume

    - Track application status
- **Employer Features:**
    - Register and login
    - Post, update, delete jobs
    - View applicants
    - Accept or reject applications
- **Admin Features:**
    - Manage users
    - Monitor job postings
    - Remove inappropriate content
    - View system reports
- **System Features:**
    - Secure login (JWT-based)
    - Role-based dashboards
    - Job posting and application management
    - Resume upload functionality
    - Search and filter jobs
- **Database Entities:** Users, Jobs, Applications, Resumes
- **Relationships:**
    - One employer → many jobs
    - One job → many applications
    - One user → can apply to multiple jobs
- **Security:**
    - JWT authentication
    - Role-based authorization
    - Secure password encryption

    - Input validation

- **Timeline:**
    - Requirement Analysis & Design → 1 Week
    - Backend Development → 2 Weeks
    - Frontend Development → 2 Weeks
    - Integration & Testing → 1 Week
    - Final Report & Presentation → 1 Week

Conclusion:

This Job Portal System provides an efficient solution for online recruitment. It allows job seekers to find and apply for jobs easily, employers to manage recruitment efficiently, and admin to control the platform. The project demonstrates full-stack development, database management, and secure authentication in a real-world system.
